# Screening and coding with LLMs

Max Callaghan

July 17, 2024

## Outlook

• Results from the implementation of Wang et al. (2024)

Coding 000

### Outlook

- Results from the implementation of Wang et al. (2024)
- Additional results from Santiago's thesis project on coding

## We can ask LLMs whether a study should be included in a systematic review

Result: <s>[INST] «SYS» You are a systematic review helper tasked with finding out whether a study is relevant to the review Drug Class Review: Pharmacologic Treatments for Attention Deficit Hyperactivity Disorder

Answer 'ves' if the study is relevant, or 'no' if not «/SYS» Study: Diuretics and beta-blockers do not have adverse effects at 1 year on plasma lipid and lipoprotein profiles in men with hypertension. Department of Veterans Affairs Cooperative

Study Group on Antihypertensive Agents. Concern based on the reported short-term adverse effects of antihypertensive agents on plasma lipid and lipoprotein profiles

(PLPPs) has complicated the therapy for hypertension. Should the study be included? Answer yes or no. [/INST] No. this study should not be included in the drug class review for Pharmacologic Treatments for Attention Deficit Hyperactivity Disorder. The study is focused on the effects of diuretics and beta-blockers on plasma lipid and lipoprotein profiles in men with hypertension, and does not directly relate to the treatment

of Attention Deficit Hyperactivity Disorder (ADHD). The review is focused on pharmacologic treatments for ADHD, and the study does not address any of the included drug classes or outcomes of interest for the review.

## We can ask LLMs whether a study should be included in a systematic review

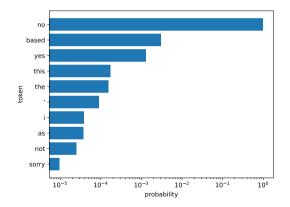

Result: <s>[INST] «SYS» You are a systematic review helper tasked with finding out whether a study is relevant to the review Drug Class Review: Pharmacologic Treatments for Attention Deficit Hyperactivity Disorder

Answer 'yes' if the study is relevant, or 'no' if not «/SYS» Study: Diuretics and beta-blockers do not have adverse effects at 1 year on plasma lipid and lipoprotein profiles in men with hypertension. Department of Veterans Affairs Cooperative Study Group on Antihypertensive Agents.

Concern based on the reported short-term adverse effects of antihypertensive agents on plasma lipid and lipoprotein profiles (PLPPs) has complicated the therapy for hypertension.

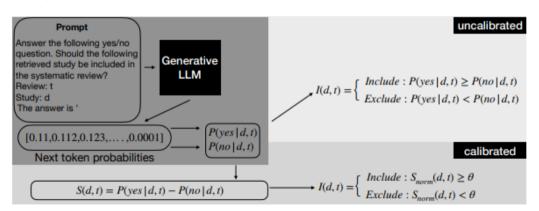

Should the study be included? Answer yes or no. [/INST] No, this study should not be included in the drug class review for Pharmacologic Treatments for Attention Deficit Hyperactivity Disorder. ## Zero-shot Generative Large Language Models for Systematic Review Screening Automation

Wang et al. (2024) propose a method to extract probability-like scores from LLMs for inclusion/exclusion decisions in a systematic review

\*\*\*\*

	Model	Setting	P	$\mathbf{R}$	B-AC	F3	Suc	WSS
CLEF-2017	BERT	$\begin{array}{c} \mathrm{Unc} \\ \mathrm{Cal}(0.95) \\ \mathrm{Cal}(1) \end{array}$	0.06 0.06 0.06	$0.95 \\ 0.92 \\ 0.97$	$0.61 \\ 0.64 \\ 0.60$	$0.30 \\ 0.31 \\ 0.29$	$0.74 \\ 0.50* \\ 0.82$	$0.26 \\ 0.34* \\ 0.23$
	Thins	Unc Cal(0.95) Cal(1)	0.08 0.06* 0.05*	0.87 0.92* <b>0.99</b> *	0.72 0.69* 0.60*	$0.35 \\ 0.32 \\ 0.28$	$0.26 \\ 0.52 \\ 0.96$	$0.56 \\ 0.44 \\ 0.20$

## Implementation is relatively straightforward

```
1 def binary_probs(tokenizer, model, prompt, no_words=['no'], yes_words=['yes'], return_all
       =False):
      device = 'cuda' if torch.cuda.is available() else 'cpu'
2
      encoded text = tokenizer(prompt, return tensors="pt").to(device)
3
      #1. step to get the logits of the next token
4
      with torch inference mode():
5
6
          outputs = model(**encoded text)
7
      next token logits = outputs.logits[0, -1, :]
8
Q
      # 2. step to convert the logits to probabilities
10
      next_token_probs = torch.softmax(next_token_logits, -1)
11
13
      topk next tokens = torch.topk(next token probs. 50)
      tokens = [tokenizer.decode(x).strip().lower() for x in topk next tokens.indices]
14
      p = topk next tokens.values
15
16
      df = pd.DataFrame.from_dict({'t': tokens,'p': p.cpu()})
      y = df[df['t'].isin(yes_words)]['p'].sum()
18
      n = df[df['t'].isin(no words)]['p'].sum()
19
20
      if return all:
21
          return df.groupby('t').sum().reset_index().sort_values('p', ascending=False).
22
       reset_index(drop=True)
      return v-n. v+n
23
```

## Implementation is relatively straightforward

 The method produces a ranking that identifies all relevant documents before all documents have been screened

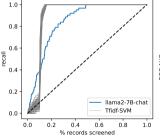

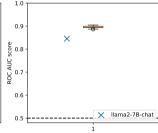

### Result #1: It works!

- The method produces a ranking that identifies all relevant documents before all documents have been screened
- But it doesn't perform as well as simple tfidf + SVM

Brouwer\_2019 (N=38114, p=0.2%)
Psychological theories of depressive relapse and recurrence: A systematic review and meta-analysis of prospective studies

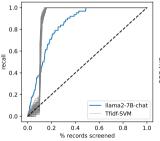

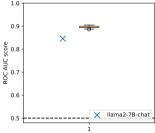

### Result #1: It works!

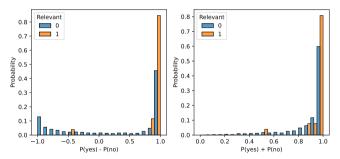

- The method produces a ranking that identifies all relevant documents before all documents have been screened
- But it doesn't perform as well as simple tfidf + SVM
- To compare the quality of rankings, we can use ROC AUC scores

Brouwer\_2019 (N=38114, p=0.2%)
Psychological theories of depressive relapse and recurrence: A systematic review and meta-analysis of prospective studies

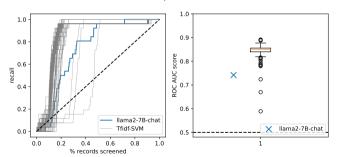

Appenzeller-Herzog\_2019 (N=2873, p=0.9%)
Comparative effectiveness of common therapies for Wilson disease: A systematic review and meta-analysis of controlled studies

 We generated LLM inclusion scores for each document in a set of reviews in the Synergy dataset Coding

Appenzeller-Herzog\_2019 (N=2873, p=0.9%)
Comparative effectiveness of common therapies for Wilson disease: A systematic review and meta-analysis of controlled studies

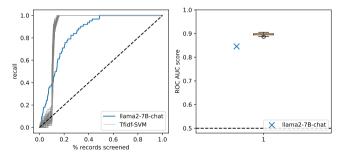

- We generated LLM inclusion scores for each document in a set of reviews in the Synergy dataset
- We compare what happens to screening in descending order of this ranking to 100 active learning runs with a default configuration of SVM with Tfidf

Bos\_2018 (N=4878, p=0.2%)
Cerebral small vessel disease and the risk of dementia: A systematic review and meta-analysis of population-based evidence

- We generated LLM inclusion scores for each document in a set of reviews in the Synergy dataset
- We compare what happens to screening in descending order of this ranking to 100 active learning runs with a default configuration of SVM with Tfidf
- Initial results are not very promising

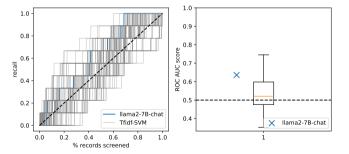

Brouwer\_2019 (N=38114, p=0.2%)
Psychological theories of depressive relapse and recurrence: A systematic review and meta-analysis of prospective studies

- We generated LLM inclusion scores for each document in a set of reviews in the Synergy dataset
- We compare what happens to screening in descending order of this ranking to 100 active learning runs with a default configuration of SVM with Tfidf
- Initial results are not very promising

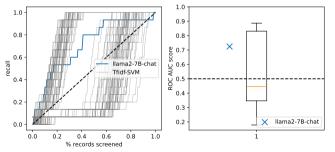

Chou 2004 (N=1630, p=0.6%)

Comparative efficacy and safety of skeletal muscle relaxants for spasticity and musculoskeletal conditions: a systematic review

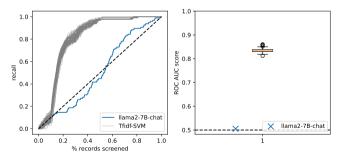

- We generated LLM inclusion scores for each document in a set of reviews in the Synergy dataset
- We compare what happens to screening in descending order of this ranking to 100 active learning runs with a default configuration of SVM with Tfidf
- Initial results are not very promising
- But LLMs can do well where traditional methods struggle

- We generated LLM inclusion scores for each document in a set of reviews in the Synergy dataset
- We compare what happens to screening in descending order of this ranking to 100 active learning runs with a default configuration of SVM with Tfidf
- Initial results are not very promising
- But LLMs can do well where traditional methods struggle

Jeyaraman\_2020 (N=1175, p=8.2%)
Does the Source of Mescchymal Stem Cell Have an Effect in the Management of
Osteoarthritis of the Knee? Meta-Analysis of Randomized Controlled Trials

- We generated LLM inclusion scores for each document in a set of reviews in the Synergy dataset
- We compare what happens to screening in descending order of this ranking to 100 active learning runs with a default configuration of SVM with Tfidf
- Initial results are not very promising
- But LLMs can do well where traditional methods struggle
- Sometimes they are no use at all

- Updating prompts based on user feedback

 LLMs are neither a quick fix or a silver bullet

- LLMs are neither a quick fix or a silver bullet
- Evaluation is vital

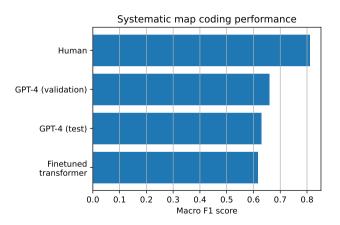

- LLMs are neither a quick fix or a silver bullet
- Evaluation is vital
- We can't forget the need for appropriate stopping criteria Callaghan and Müller-Hansen (2020)

 Santiago's thesis showed us that LLMs can achieve comparable performance with BERT-type models

- Santiago's thesis showed us that LLMs can achieve comparable performance with BERT-type models
- They need no training data to achieve this performance

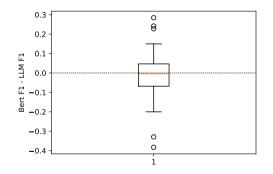

- Santiago's thesis showed us that LLMs can achieve comparable performance with BERT-type models
- They need no training data to achieve this performance
- But we do need annotated data for "prompt engineering" (≈ training?), and for evaluation

Results were aggregated Macro F1 scores for 30 labels

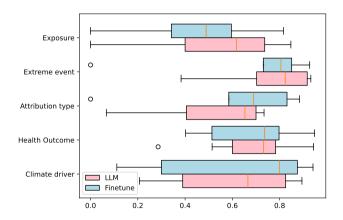

- Results were aggregated Macro F1 scores for 30 labels
- Aggregate results hide much variation

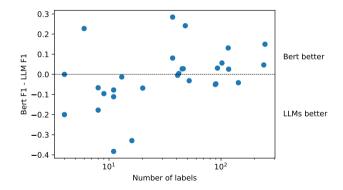

Bert better

LLMs better

- Results were aggregated Macro F1 scores for 30 labels
- Aggregate results hide much variation
- This varies across the different coding categories

- Results were aggregated Macro F1 scores for 30 labels
- Aggregate results hide much variation
- This varies across the different coding categories
- And there seems to be a clear correlation with number of labels
